

*Utica Tubular Spreading Machine*

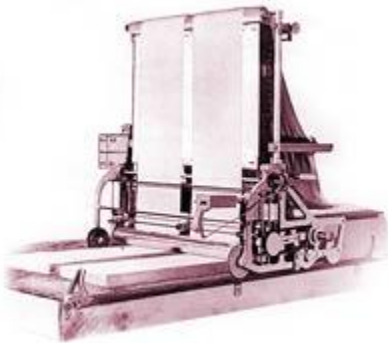

## Utica Tubular Spreading System

The Utica Tubular Lay-up Machine illustrated to the left, comes with a full range of standard & optional features that will get the job done with fewer problems and at a very competitive price.

Completely manufactured in the USA, the Utica machines have set the standard for affordable, and reliable, textile machinery.

The Hand Lay-up machine will take tubular material from either a Roll or Flat Folds and spread it onto a table for cutting. You can spread several times the amount of cloth that you can spread by hand and it does not require an Expert to operate the machine.

The cloth is held open by an adjustable spreader that goes inside the material to guide and hold the edges even. Stops on the table keep the ends uniform, thus eliminating waste. The cloth is fed on the table by adjustable feed rolls. The rolls are driven by a Gear Track that runs the length of the table. This provides for a tensionless spread eliminating stretch and providing uniform garments. The feed rolls can be adjusted from light to heavy weight materials.

### Standard Widths:

26" • 32" • 38" • 44" (custom sizes available)

### Standard:

Maximum Spreading	10"
Height:	
Material Forms:	Rolls or Forms
Feed Type:	Variable Belt
Track Stops:	1 Set
